In 1999, in the wake of public criticism about experiments such as those listed above, Dr. William Carpenter, director of Maryland Psychiatric Research Center (MPRC), a leading defender of provocation experiments in psychiatry, examined data from ketamine experiments conducted at MPRC, at NIMH, and Yale University. He reported that "56 subjects participated in approximately 62 placebo and 150 ketamine infusions." He further reported that 12 of the Yale patients,

"experienced more difficulty than was observed in the MPRC and NIMH studies... Worsening of general clinical condition and of psychosis was more profound in several cases including [] two where the procedure was terminated early... The greater difficulty in the Yale experience may be due to the inclusion of more acutely ill patients."
See, Carpenter, WT. "The schizophrenia ketamine challenge study debate," *Biological Psychiatry*, 1999, 46: 1081-1091.
